

Wency Valentin

Product-minded Full-Stack Developer

Manila, Philippines · Open to remote · Available immediately · wency19valentin@gmail.com
portfolio-wency.vercel.app · github.com/lukahristic · linkedin.com/in/wency-valentin-33ab72274

Six years deciding whether things follow the rules — five on healthcare claims and appeals, the last reviewing developer applications against platform policy. I now build software where those rules are enforced by the database rather than by a policy document. I plan before I build, read the documentation before I implement, and treat AI output as a first draft that needs direction. Both projects below are public; one is deployed with a login you can use.

PROJECTS

Spottr — Gym community app

React Native · Expo · Supabase · PostgreSQL · Next.js

github.com/lukahristic/spottr

A real-time social layer for gyms: co-present members signal openness and exchange one introductory message, solving the mutual hesitation that stops gym-goers connecting.

- Caught that the original status feature forced users to publicly declare their experience level — the exact anxiety the app exists to remove. Rebuilt it around mood, with willingness to talk as a separate opt-in toggle.
- Encoded safety at the database layer rather than in application code: blocks enforced by row-level security so blocked users return nothing, and the one-introduction limit as a UNIQUE constraint.
- Audited my own production schema and found permissive RLS policies granted to the anonymous role, exposing every gym's roster and allowing forged check-ins. Rewrote policies across all affected tables.
- Architected four coordinated systems: React Native app, Next.js admin portal with role-scoped views, marketing site, and a Supabase backend with Edge Functions and scheduled jobs.
- Built GPS-verified check-in (proximity only, never stored), realtime presence, push notifications, automated checkout, and a scheduled data-retention policy.
- 226 commits. Currently in private beta and in conversations with gyms.

MotorShop — E-commerce platform

Next.js · TypeScript · Prisma · PostgreSQL · Docker · Vercel

motorshop-sepia-omega.vercel.app · github.com/lukahristic/motor-shop

A motorcycle parts store built as a deliberate exercise in assembling a real application correctly. Deployed, with demo accounts published in the repository.

- Modelled vehicle fitment as a many-to-many relationship — Year/Make/Model resolving through a compatibility join table — so results only show parts that fit the selected bike.
- Wrote authentication by hand rather than adopting a drop-in library: bcrypt hashing, JWT in HTTP-only cookies, and role-based middleware guarding admin routes and mutation endpoints.
- Returned identical responses for wrong email and wrong password, so the login form cannot be used to enumerate registered accounts.
- Ran containerised Postgres locally against managed Postgres in production from one Prisma schema, keeping environments honest.

EXPERIENCE

Content Moderation Specialist — Developer Applications

2025 – 2026

Accenture

- Review developer application submissions against platform policy, assessing risk indicators, policy violations, and submission accuracy to support approval and rejection decisions.
- Identify unclear submissions and gaps in the policy itself, feeding quality improvement.
- Apply consistent judgment to sensitive, high-impact content under strict confidentiality and data-protection standards.
- Identified that knowledge was scattered between the review team and the trainers supporting it; designed and built a centralised knowledge platform in Google Apps Script and Sheets, covering workflow documentation, policies, calibration updates, and reusable snippets.
- Built an admin portal so SMEs and Team Leads could maintain the platform without engineering support, keeping it current after my departure.
- Built a review annotation generator producing standardised templates from workflow requirements, and presented both tools — and the NotebookLM-based method behind them — to SMEs, Team Leads, and Managers.

Healthcare Claims & Appeals Processor

2020 – 2025

Accenture

- Processed medical insurance claims and handled provider and customer appeals against client policy, contractual agreements, and regulatory guidelines.
- Performed case analysis on medical documentation to identify discrepancies, coverage issues, and billing errors.
- Documented decisions to an audit-ready standard while meeting strict accuracy and productivity targets on high-volume workloads.

EDUCATION

BS Information Technology

Bestlink College of the Philippines

TECHNICAL SKILLS

LANGUAGES	TypeScript, JavaScript, SQL
FRONTEND	React, React Native (Expo), Next.js, Astro
BACKEND & DATA	PostgreSQL, Supabase, Prisma, Row Level Security, REST APIs, authentication
TOOLING	Docker, Git, Vercel, EAS Build
AI-ASSISTED WORKFLOW	Claude Code, prompt engineering, documentation-first development
